Investment Policy

- We remain cautious in **fixed income** favoring **short to medium** maturities due to a very unattractive combination of risk and return in longer maturities. We have **increased High Yield** and **subordinated debt** exposure as we think that after Trump's victory the risk of recession in the US has abated. **High quality bonds in the US** – particularly **corporate investment grade** – remain attractive in relative terms, and **Treasury bonds** could protect the portfolios from a slowdown in growth, although the latter is now less likely. We also have a significant position in inflation-linked US Treasury bonds (**TIPS**) to get protection against an increase in inflation as a consequence of reflationary policies. Finally, we have also increased our allocation to **convertible bonds**, as the current low volatility environment makes them increasingly attractive from a valuation perspective
- **Equity valuations in the US** remain very high, mostly **supported by low interest rates** and high expectations of **tax reform** and **deregulation**. Combined with positive macro data from other main developed markets, we see a **greater chance of a reacceleration in global economic growth**. However, with the **Fed potentially normalizing interest rates at a faster pace**, there is a risk of returning to lower valuation multiples. Therefore, we recommend to take equity exposure in a **non-directional way**. From a relative **valuation** perspective, we favor **European and Indian equities, quality growth stocks, biotechnology** and **listed real estate**
- Our **diversified commodities** and **gold** allocations, further help us to **increase diversification** and to position the portfolios for a scenario of **rising inflation**
- **Alternative investments** offer a much needed source of **diversification**. Besides **cat bonds** and **private equity**, we have recently increased the allocation to **hedge-funds**, by investing into liquid and low cost **multi-manager/multi-strategy** fund of funds
- We have **reduced our cash allocation** as **negative interest rates** have been introduced in some of our reference currencies. We have also **reduced** the allocation to **short-term high quality bonds** that we held as an alternative to cash and increased credit exposure instead, with the aim of increasing the yield of the portfolio

Positive global economic momentum

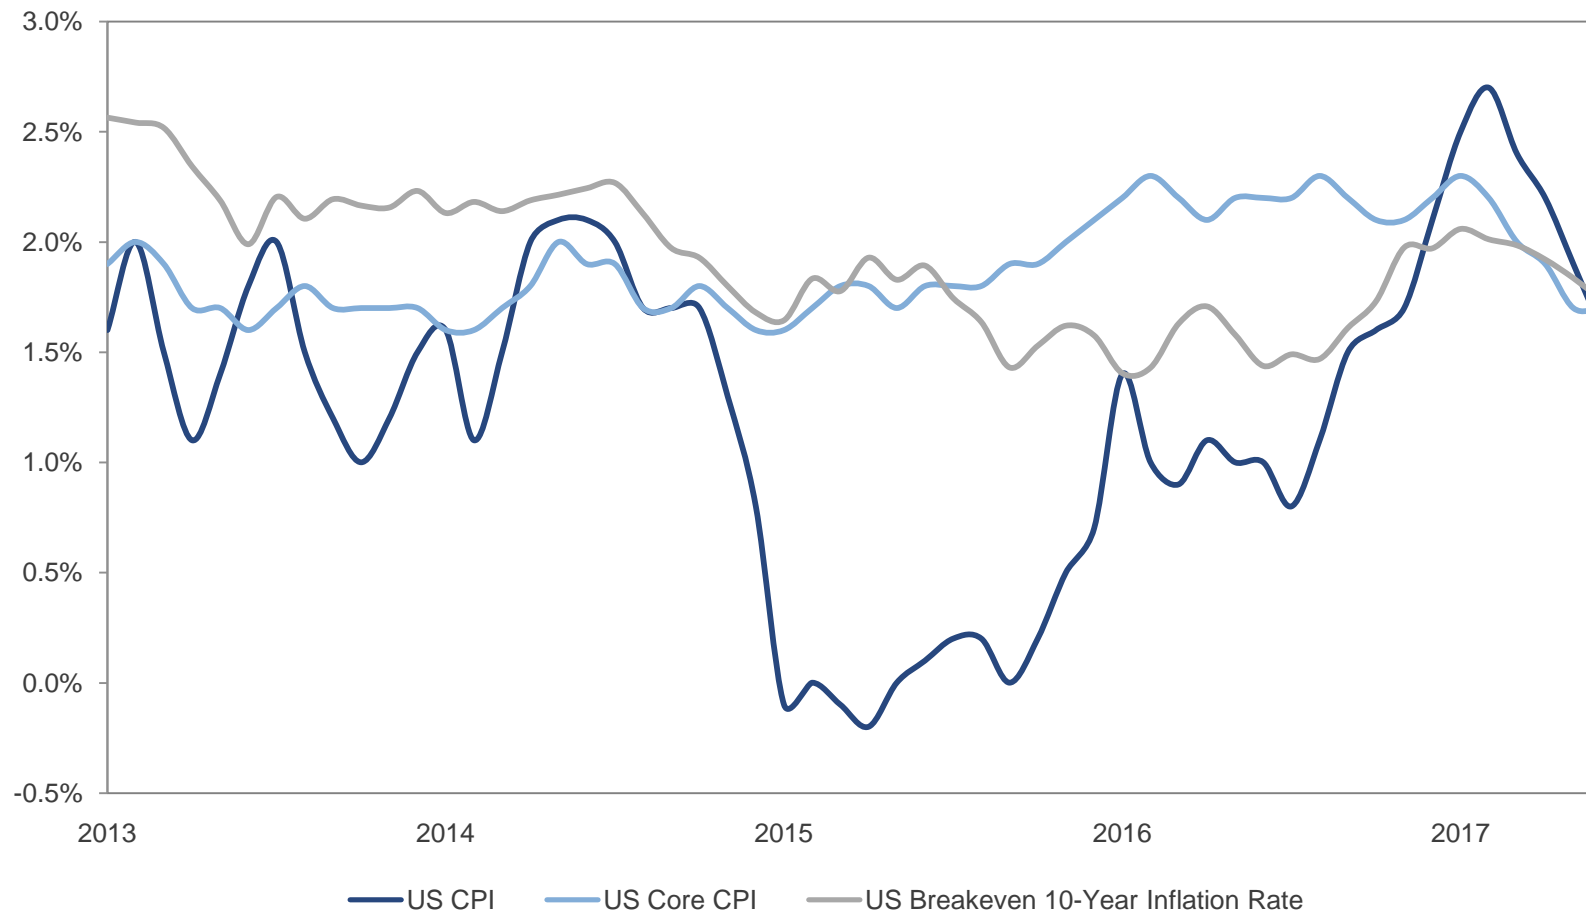

- The **global economy keeps its positive momentum**, with leading indicators reaching levels consistent with periods of strong economic growth in the past
- The recovery in confidence from the lows in 2015 has been **synchronized in timing, but diverging in amplitude** across regions. Some economies like Germany are running at full steam whilst others like China, show no sign of acceleration

The Fed seen as pausing for the rest of the year

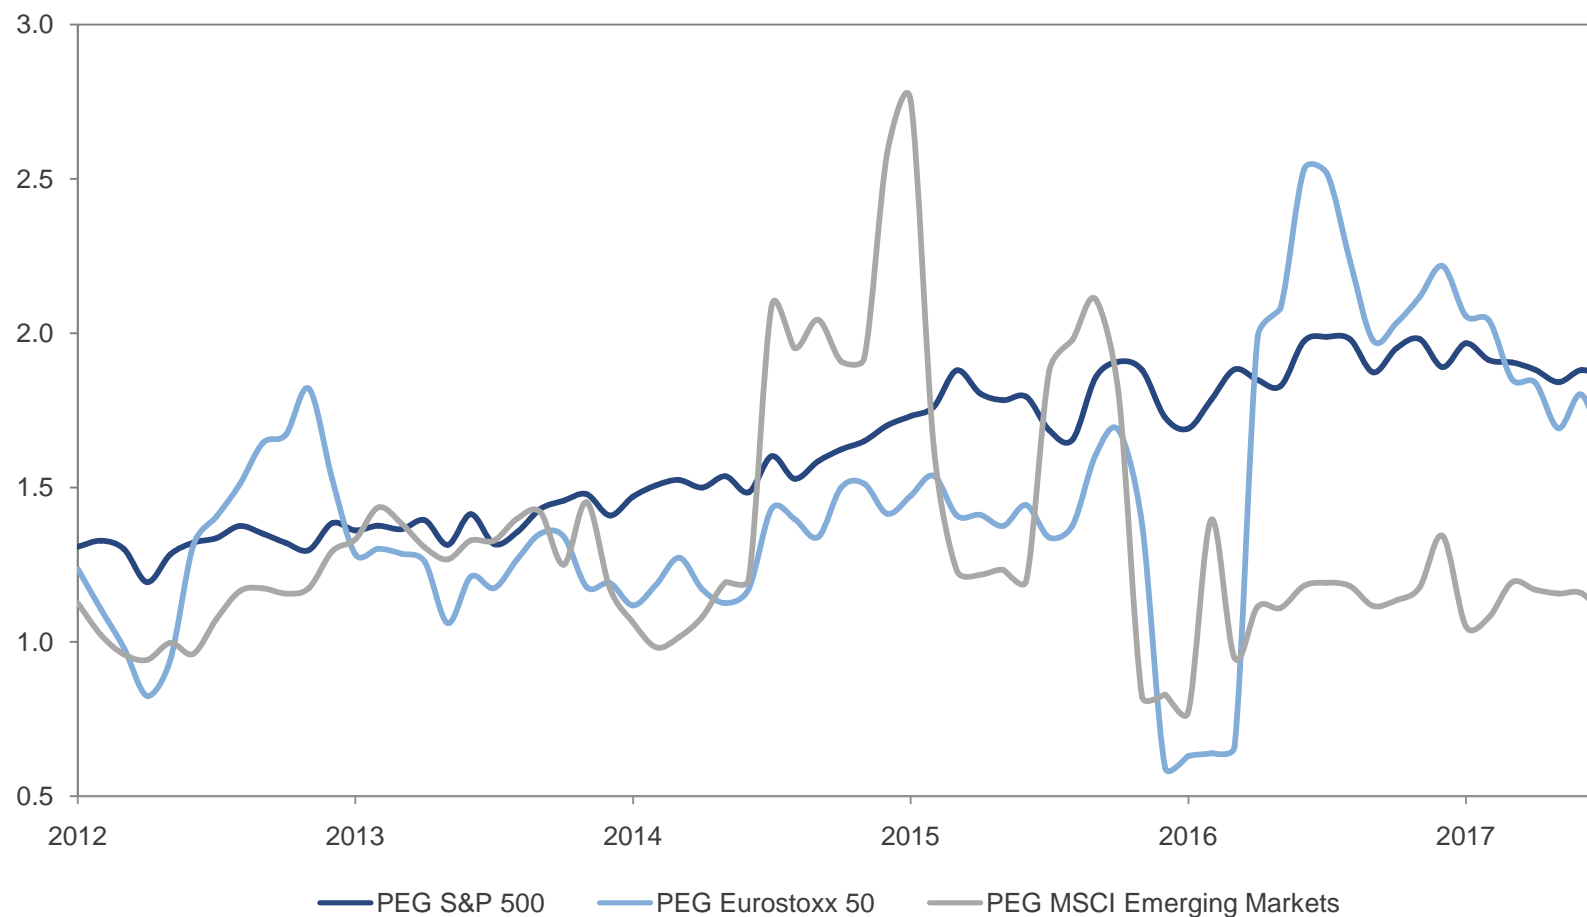

- **Expectations of future interest rate hikes** by the Fed have **come down** drastically since the last FOMC meeting
- The market is currently assigning very **little probability** to a hike in the meetings of **September** and November, and only about 30% to a December hike

Disappointing inflation data provides the excuse

- Three consecutive months of **disappointing inflation** data have contributed to lower the expectations for a Fed hike this year, and **suppressed US Treasury yields to the levels before the US elections**
- Inflation expectations have also made a U-turn, signaling **little confidence in the ability of the new US administration for implementing its reflationary agenda**

Valuations remain high despite better growth prospects

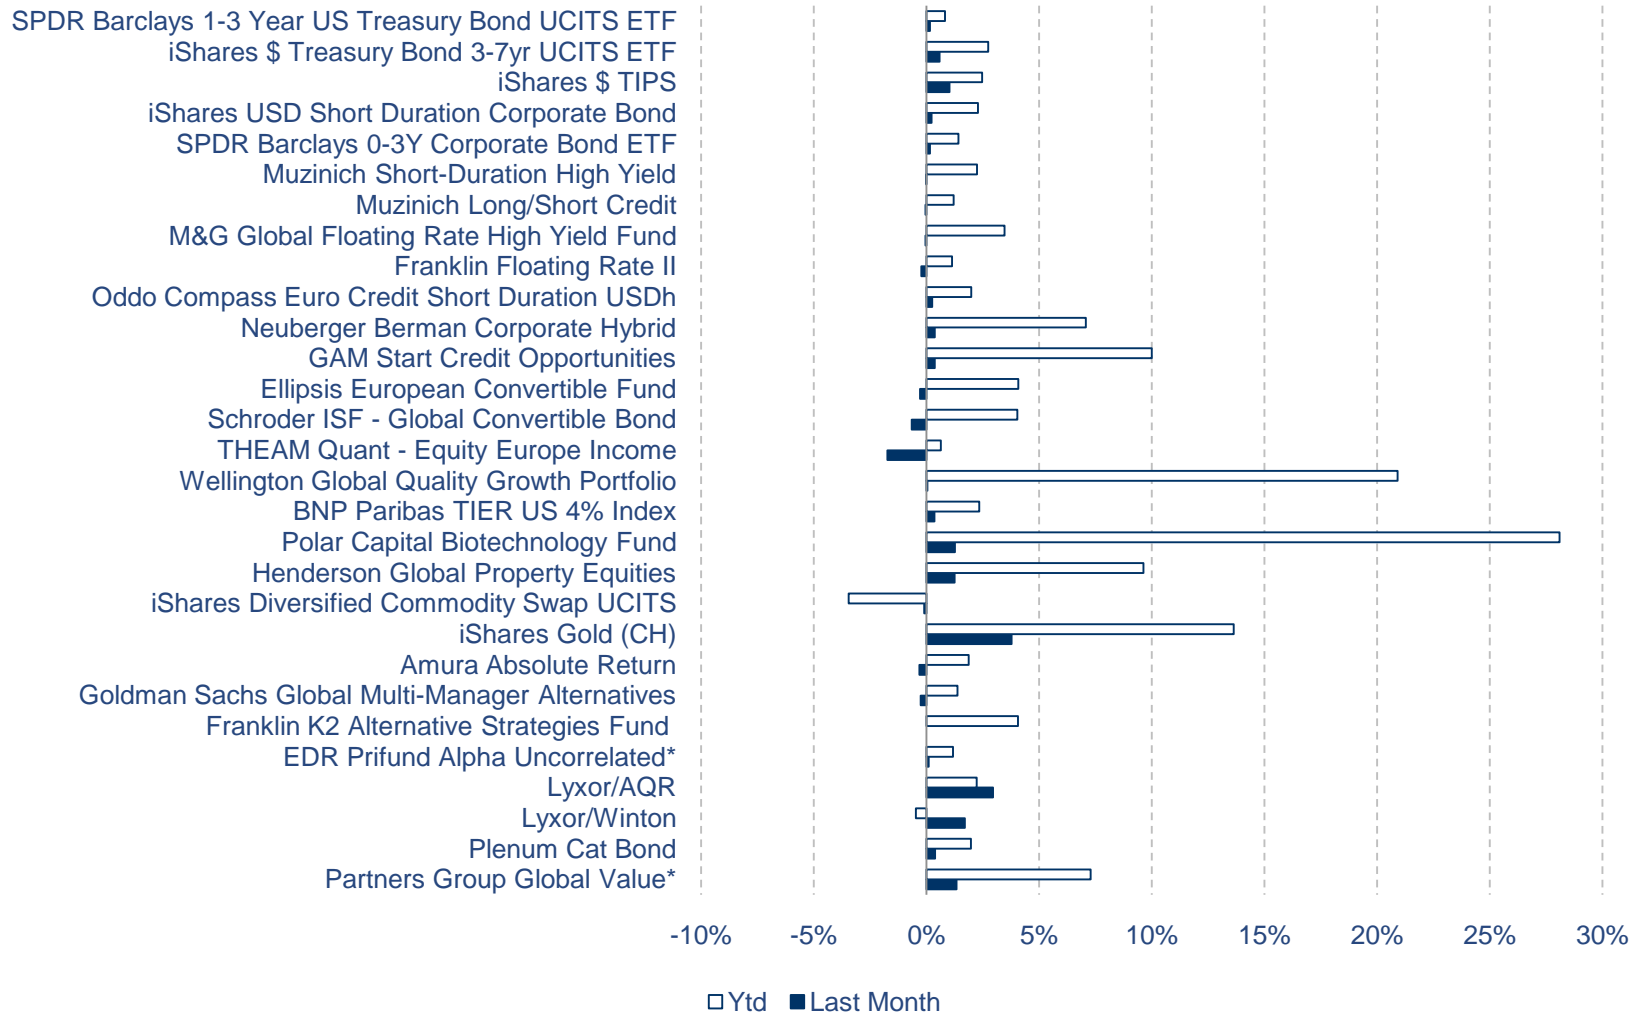

- **High P/E multiples** need to be put in context of the **expected growth in corporate earnings**, something that is accounted for in the **PEG ratio**
- By this measure, we can see that the growth in prices has not been accompanied by a growth in forward earnings, and hence **valuations have turned more expensive**. This is the case for the **US and Europe**, but **not for emerging markets**

USD weakness continues surprising

- The US dollar has continue depreciating against major trading currencies, as a consequence of **lower than expected inflation** figures, and the subsequent **decrease in interest rates**
- However, **interest rate differentials** have not moved in a corresponding amplitude, and we expect a **revaluation of the USD** to happen once the **Fed continues with the normalization** of interest rates, or the **new administration** pushes through with its **reflationary agenda**

Model portfolio evolution

- **Biotechnology, listed real state and gold** were the positions that added most to the performance
- On the negative side, **European equities** had another negative month

 * Fund publishes monthly NAV with a 1 month of delay

	Scenario 1 Recession by political/policy accident	Scenario 2 Muddling through “+”	Scenario 3 New regime
Drivers	<ul style="list-style-type: none"> Global economic slowdown caused by political accidents or policy errors (Trade war with China, EU breakup, a too aggressive Fed, etc.) Deflationary scenario due to a combination of low growth and structural factors, although the rise of protectionism would be inflationary The Fed will have to reverse course, which would be complicated if inflation is rising 	<ul style="list-style-type: none"> The fiscal stimulus in the US provides a short-term impulse to the global economy, but not enough to attain a higher growth trajectory Inflation, particularly in the US will pick-up, but remains subdued globally due to structural factors (demographics, low aggregated demand, deleveraging) The Fed will continue its normalization path 	<ul style="list-style-type: none"> Growth concerns dissipate, with economic activity accelerating in US, Europe and Japan Inflation in the US increases, as a consequence of president Trump’s fiscal stimulus, and pulls other developed economies off deflation The Fed will have to step up the pace of rate increases and/or reduce balance sheet
Market impact	<ul style="list-style-type: none"> Correction in credit due to a rise in defaults and a widening of corporate spreads Correction in equities due to lower projected earnings, though low rates will offer support Sovereign and IG credit to profit due to flight to quality and the continuation of an ultra-loose monetary policy globally USD neutral to weak as flight to quality is counterbalanced by low interest rates Commodities will fall 	<ul style="list-style-type: none"> Equities appreciate moderately, with Europe and Japan catching up with the US Credit spreads remain stable as the credit cycle is further elongated Sovereigns suffer as monetary policy is progressively normalized USD appreciate moderately due to higher interest rate differentials Commodity prices will rise in the short-term, normalizing once the impulse vanishes 	<ul style="list-style-type: none"> Impact on equities will depend on how much real economic growth is sustained, and how accommodative the Fed remains Sovereign and IG bonds will face steep losses due to higher rates, particularly if long-term inflation expectations rise Corporate credit will correct moderately if inflation comes together with higher growth The USD will appreciate, particularly against those currencies facing deflation Commodities will gain from higher inflation
Probability	35%	35%	30%
Short-term catalyzers			
Fiscal stimulus in the US, improvement in macro-data globally, oil price stabilization			
Other risks			
Trade wars and EM slowdown, Spread of anti-establishment parties, EU Breakup (Frexit, Nexit ...), China, Terrorism			

MWM Investment Policy

Cash

- In the current environment waiting for good investment opportunities is a sensible investment strategy. However, holding cash is becoming costly in some of our reference currencies

Fixed Income

- Corporate debt and High Yield currently offer the best combination of risk and return. Treasuries can benefit from a slowdown in growth – although this less likely with the expected fiscal stimulus in the US – whilst TIPS offer protection against rising inflation
- We avoid emerging markets until there is more clarity on trade policy by the new US administration

Equity

- The expected fiscal stimulus in the US will accelerate growth and postpone the fear of deflation, which will be supportive for equities as the top line will increase. However, it remains to be seen to which extend this comes along with an increase of interest rates, which will be a drag on valuations
- We favor investments in non-directional strategies, as well as in preferred companies and sectors

Commodities

- Commodity prices have recently stabilized. Reflationary policies, and in particular a boost in infrastructure spending, will further support energy and industrial metals
- Gold and precious metals will be dependent on the relative pace of increase in both inflation and interest rates, but offer in any case good diversification for the portfolio

Alternative investments

- Alternative investments as a source of low volatility and uncorrelated returns are more attractive than ever in the wake of the current latent risks in the market
- However, there is always a certain degree of correlation with traditional asset classes and double digit positive returns cannot be expected in the current environment
